If you have trouble reading this e-mail, please click [here](#).

TOP 5 PACS MYTHS

Everybody knows web pages can't:

1. Display **diagnostic-quality images**.
2. Provide **workstation-like image analysis tools**.
3. Allow **image sharing with distant colleagues**.
4. Display medical images with **no client software to install first**.
5. Provide all of the above **for free!**

Well then, how do you explain this:
